

## The ViPNet Mobile Security Suite is now available in Google Play

New York, September 14, 2016 – Infotecs, a leading international Cyber Security and Threat Intelligence Platform provider, announced that the mobile applications ViPNet Client for Android and ViPNet Connect – the two main components of the secure mobile solution ViPNet Mobile Security Suite – are now available in Google Play, Google's official store and portal for Android apps.

ViPNet Client for Android protects corporate workers with Android-based mobile devices from internal and external cyberattacks, which could compromise the security of sensitive corporate data and threaten the privacy of business communications. Moreover, as the ViPNet Client works with normal Android and iOS phones it delivers military grade encryption on commercially available handsets with better performance and lower cost. With ViPNet Client for Android you can have secure access to critical resources and services: a web portal, an email server, IP telephony, mobile applications, etc.

ViPNet Connect is a real-time communication software for mobile and desktop, which empowers corporate workers and executives to perform their duties anytime, anywhere. It keeps them connected and productive on the move, from any location. ViPNet Connect offers various options for encrypted communication with other VPN users such as chat, IP telephony, video conferencing and file exchange.

Both applications of the ViPNet Mobile Security Suite provide enterprise grade security for mobile without compromising on usability or performance in one flexible, scalable, cost-effective solution. Both components are easy to install, easy to use and provide seamless "always on" mobile security allowing you to communicate safely, securely and efficiently.

As of now the components ViPNet Client for Android and ViPNet Connect are available for download in Google Play for users of 80 countries.

"Mobile security issues are becoming more and more important. The number of security incidents on smartphones and other devices keeps growing. We are pleased to provide our clients an enterprise grade encryption solution for mobile users which is very convenient to use and can be downloaded from Google's official online store for millions of users", says Ken Nevard, Channel Sales Manager of Infotecs Americas.

The mobile ViPNet Client application is available for devices based both on Android and iOS operating systems.

### About Infotecs

A pioneer of software-based VPN solutions since 1991, Infotecs developed its Peer-to-Peer ViPNet technology to deliver greater security, flexibility, and throughput than IPSec and other standards-based VPN products. ViPNet is the only VPN solution that supports true endpoint to endpoint security. More than 1,000,000 clients, offices, and servers have been securely connected with ViPNet products, backed up by an unparalleled world-class support, development, and technical team. Our solutions are designed to solve the toughest security challenges by providing superior protection that is flexible and effective. Infotecs has a strong network of partners and actively develops its international presence having subsidiaries in Europe and the Americas.
